

3W Technologies, Inc. not only provide innovative, unique and customised [products](#) for bio-medical industries and life science researches, but also provide [instrumental design and development](#), [OEM production and instrument repair services](#). With a team of engineers and research scientists, 3W Technologies, Inc. is headquartered in Santa Clara, CA, USA (Silicon Valley), and has manufacturer facility in Shanghai, China. 3W Technologies, Inc. has provided [products](#) and [services](#) worldwide.

Handhold Fluorometer is a open platform for reagents from any sources. Now we have excitation wavelengths at 315nm, 365nm, 408nm, 480nm, 532nm, 635nm and 650nm available. It is sensitive, rapid, portable, easy to use with PCR tube or cuvette.

Our Handhold Luminometer is the most sensitive Luminometer in the market. We use the photon-counting sensitivity level sensor. Smart mechanical design to prevent sensor damage. Sample holder can be PCR tube or cuvette.

3W Technologies, Inc. has long history to develop fluorescence scanners. Our line scan reader has been produced as standard reader for cardiac bio-marker detection since 2007. Our new 2D fluorescence reader provides cost effective solution for peptide array, DNA array and antibody array detection.

Our redesigned pipette, not only focusing lab ergonomics, but also provides easy calibration software to ensure each you experimental result calibration traceable.

Our unique Centrifuges PrimeSeptra™ and MiniMax™ bring multipurpose versatility to every lab bench! The compressor at the back of the centrifuge keeps the footprint small and the access height low. Equipped with the latest innovations in cooling technology such as programmable pre-cooling time, ECO shut-off function, dynamic compressor control, Model PSC-18R assures accurate temperature control, highest energy efficiency and ease of operation.

3W technologies, Inc. was started for engineering services for bio-medical industries and life science researches. Our engineering services are still our most important parts of our businesses.

From concept, prototype, to volume production, 3W Technologies, Inc can work with you either as an extension of your existing product development team or as a stand-alone innovative team to optimize your design and customize your products for performance, cost, and delivery.
